

PRISME

PRISME Q8

PRO E-SPORT GPU EXPANSION MODULE

Feed the GPU earlier. Reduce CPU overhead. Unlock more useful work.

Built for elite competitive systems where lower delay, cleaner data flow and higher sustained GPU utilization can translate into a real edge.

Competitive Data Path

Moves selected data toward the GPU with fewer wasted steps.

Latency-Focused Architecture

Designed around the fight against the delay that competitive players feel.

Theoretical Uplift

Target architecture supports up to 3× GPU-side performance uplift in best-case top-tier scenarios.

Team-Ready

Positioned for pro team deployments, sponsor builds and showcase arenas.

PRO TEAMS

TOURNAMENT SETUPS

GAMING HOUSES

HIGH-END
SYSTEM PARTNERS

Performance depends on workload, integration and validation. Current latency and uplift figures are theoretical design targets pending full live verification.

Q8 PRO E-SPORT
GPU EXPANSION MODULE

WHY PRO TEAMS STILL LOSE TIME

Too much delay between data, CPU and GPU
can cost **consistency** in competitive play.

1 CONVENTIONAL PATH

STORAGE

CPU

BUS

GPU

1 Repeated copies

Data may be copied multiple times between storage, CPU and GPU.

2 CPU coordination load

CPU time spent on movement, formatting and coordination instead of game logic.

3 GPU waiting

The GPU may stand idle while data is moved or prepared.

4 Uneven frame-time

Spikes and variance reduce consistency and responsiveness.

2

THE PRISME PATH

PRISME Q8
GPU EXPANSION MODULE

SELECTED DATA

GPU

1 Earlier preparation

Selected data is prepared earlier, closer to the GPU, before the next compute stage.

2 Less wasted movement

Fewer and shorter data moves keep more of the workload in motion.

3 Lower CPU overhead

CPU cycles are freed for game logic, strategy and decision making.

4 More useful GPU work

The GPU spends less time waiting and more time on frames that matter.

What teams can measure:

frame-time stability, sustained GPU use,
system overhead and end-to-end responsiveness.

Performance outcomes depend on workload, platform integration and final validation.

Competitive advantages shown here reflect the intended architecture and theoretical design direction.

PRISME

PRISME Q8

PRO E-SPORT GPU EXPANSION MODULE

TARGETING UP TO 3x GPU-SIDE UPLIFT

A focused competitive architecture designed to **feed elite GPUs earlier** and **reduce wasted system work**.

1 Best-case top-tier scaling

Target path supports up to 3x theoretical uplift in selected high-end scenarios.

2 Latency-focused design

Built around the fight against the delay players actually feel.

3 Cleaner GPU feed

Selected data reaches the graphics path sooner.

4 More stable sessions

Built for long scrims, bootcamps and tournament weekends.

5 Coach-ready evaluation

Easy to benchmark with FPS, frame-time, utilization and response tests.

6 Future acceleration ready

Prepared for next-generation performance ecosystems.

Built for:

Counter-Strike, competitive shooters, battle royale,
racing sims, creator-streamer setups.

The up to 3x statement is a theoretical best-case target for selected top-tier graphics-card scenarios and remains subject to verification.

PRISME

READY FOR TEAM EVALUATION

For elite e-sport organizations,
system integrators and performance-focused partners.

Team deployment story

Part of the PRISME roadmap

IDEAL PARTNERS

- Professional teams
- Tournament operators
- Gaming houses
- Hardware sponsors
- Performance labs
- Boutique PC builders

Specifications, performance claims and release timing follow ongoing integration work,
independent testing and final validation.

PRISME

BUILT FOR THE MODERN E-SPORT TEAM

One focused expansion path for practice rooms,
bootcamps, arena setups and sponsor showcases.

5 PLAYERS + 3 SUPPORT NODES. ONE UNIFIED ADVANTAGE.

**Team-ready
rollout**

One performance story
across the whole roster.

**Arena
showcase value**

High-visibility hardware for
sponsors, partners and
media.

**Scalable
deployment**

Start with a star team.
Expand when results
justify it.

**Part of the wider
PRISME vision**

Fits a broader modular
ecosystem for future
performance paths.

WHY IT'S REVOLUTIONARY

**Targets the real
bottleneck**

Moves data to the GPU
earlier—freeing CPU
resources for what matters.

**Adds value without
replacing every PC**

One module upgrades many
systems—lower cost, less
disruption.

**Creates a marketable
hardware story**

A visible advantage your
team can showcase to fans,
partners and media.

**Opens a path toward
future optical
acceleration**

Optical DNA today.
Smarter performance
tomorrow.

Team deployment visuals are illustrative. Final configurations depend on integration and validation.
